

Got Leaks?
We Got Your Solution!

Meter Test:

- Make sure no water is being used in or around your property
- Locate the water meter to your property (usually located in the front of home, near the street in a covered box marked "Meter")
- Write down the numbers showing on the face of the meter (Depending on your meter type you may also see a small silver or red wheel or small triangular dial that rotates when water is moving through the meter, if any of these dials are moving it's probable that you have a leak)
- Wait at least 30 – 45 minutes without using water and return to the water meter to check the numbers showing, if the numbers have not changed, there is not a leak in pressurized system of the property
- If the numbers have changed it is probable that you may have a leak and should consider scheduling a leak detection inspection

If you have found unexplained water or suspect you have a leak, call Florida Leak Solutions, Inc., for a free consultation (free estimate included) and to schedule a convenient time for one of our professional Leak Detection Technicians to meet with you."
